TO THOSE INTERESTED IN NEW MEXICO'S AGRICULTURE:

Farmers and ranchers have always known the impact of the market: its demands are rigorous and require a production response based on sound information. Agricultural statistics provide this timely input as well as a historical record of past occurrences. With statistics, producers can begin to chart the future.

Agricultural statistics are a map for agribusiness. They are also decision makers' tools for recommendations affecting the nation's agriculture.

The New Mexico Department of Agriculture is pleased to contribute to the publication of agricultural statistics for New Mexico. Being part of an effort to provide information for sound decisions is rewarding. It is also important, because mapping the future for sound response to the market is the first step in food and fiber production.

STATISTICAL REPORTING SERVICE • NEW MEXICO DEPARTMENT OF AGRICULTURE

It is with pleasure that the New Mexico Crop and Livestock Reporting Service presents the 1982 edition of New Mexico Agricultural Statistics. This is the 22nd annual summary in a series which dates back to 1962.

The bulletin is a comprehensive report of New Mexico agricultural statistics. It includes data on crop production, livestock inventory numbers, farm income, prices, grain storage, fertilizer and various other aspects of New Mexico agriculture. Also, included are the preliminary series of county estimates for crop production, livestock numbers and cash receipts.

The real strength of any statistical program is the basic data provided through the cooperation received from New Mexico's farmers, ranchers and agribusiness people. We wish to extend to these voluntary reporters a special "Thank You". This publication and the many other statistical reports published by the Service would not be possible without their cooperation, patience and willingness to provide facts about their agricultural operation. We also wish to express our appreciation to county agents, university, State and Federal personnel who attended their respective county meetings and provided us with valuable insight and data for the county estimate program.

Collection and publication of these data have been made possible through the cooperative efforts of the New Mexico Department of Agriculture and the Statistical Reporting Service - United States Department of Agriculture. Funds for the reproduction were provided by the New Mexico Department of Agriculture.

I am also indebted to the staff of the New Mexico Crop and Livestock Reporting Service for their devoted service in preparing this bulletin.

Donald G. Gerhardt

1/ This does not include approximately 22.2 million acres of BLM & Forest Service land which is leased to farmers and ranches on a per head basis.
2/ Includes farms and ranches having one or more head of species.
3/ NEW DEFINITION beginning in 1975: Farms and ranches with annual sales of $1000 or more.

RANGE AND PASTURE CONDITION BY MONTHS (APRIL - DECEMBER) 1974 - 1983 1/

YEAR	APRIL	MAY	JUNE	JULY	AUGUST	SEPTEMBER	OCTOBER	NOVEMBER	DECEMBER
	PERCENT								
1974	62	54	50	39	49	65	71	73	68
1975	70	77	75	73	80	74	81	76	70
1976	60	62	66	55	67	65	70	65	64
1977	55	71	77	66	69	81	77	73	73
1978	71	65	70	76	73	70	68	70	73
1979	72	79	87	91	86	88	84	79	76
1980	71	76	76	66	52	54	64	66	56
1981	57	60	61	59	75	93	95	96	87
1982	79	72	77	77	70	79	85	81	2/
1983	83	87							

1/ Range and pasture condition is expressed as a percentage. 100 percent represents the normal growth and vitality one would expect if there had been no damage from unfavorable weather, insects, pests, etc.
2/ The December report of range and pasture condition was discontinued in 1982 due to budget cuts.

1/ Data are for farms with sales of $1,000 or more annually. 2/ Preliminary. 3/ All crops held on farms including crops under CCC and crops held off farms by farm operators. 4/ Includes debt owed to institutional lenders and to noninstitutional or miscellaneous lenders. 5/ Nonrecourse CCC loans secured by crops owned by farmers. These crops are included as assets.

1982 FARM INCOME REVIEW

By Robert L. Todd

1982 cash receipts from farm marketings in New Mexico was 963.8 million dollars, up 7 percent from 1981, but 19 percent below 1980's cash receipts of $1.19 billion. Livestock and livestock products, valued at $627.1 million, accounted for 65 percent of the total, while crops accounted for 35 percent or $336.6 million.

Cattle and calves accounted for 47.4 percent of the total cash receipts from farm marketings. Dairy products ranked second with 12.9 percent of the total receipts. All hay ranked third, accounting for 6.6 percent of total receipts, while wheat took fourth place with 6.2 percent. Grain sorghum placed fifth with 3.2 percent followed by chile and cotton. Sales from these seven commodities made up over 80 percent of the total cash receipts from farm marketings in New Mexico for 1982.

FARM INCOME CONCEPTS

Cash receipts from farm marketings represent gross income from the sales of crops, livestock, and poultry during the calendar year. The value of home consumption of farm products, inter-farm sales of livestock, and crops fed on farms where grown are not included as cash receipts. Production expenses such as feed, fuel, fertilizer, and marketing costs are not subtracted from gross cash receipts. County estimates of cash receipts reflect farm productivity of the county to which the income is assigned. For example, income from crops is credited to the producing county even though the crops may be stored, processed, and marketed in another county.

Cash receipts from marketings of crops is the final product of several estimates: acreage, yield, percentage of total production sold, average price, and changes in inventories. For field crops such as corn, hay, cotton, sorghum grain, which are harvested during one calendar year and portions are sold the next calendar year, cash receipts are not to be compared with crop year value of sales. Calendar year cash receipts from such crops represent sales of parts of production from two or more crop years. For crops such as peanuts, cash receipts are essentially the same as the value of production since the crop is all or nearly all harvested and marketed within a single calendar year.

The annual cash receipts from farm marketings of livestock and poultry also refer to the calendar year. Receipts include the sales value of an animal only once, usually the calf at the time it is sold for slaughter or final disposition. These income data do not exactly represent the summation of all income received from livestock and poultry producers in a given county. For example, feeder pigs or cattle sold from one farm to another within a county are included only upon final disposition.

1/ Details may not add to totals due to rounding. Revisions were made for the years 1970-1977 after the Economic Indicators of the Farm Sector publication, ECIFS 1-1, was published in August, 1982.
2/ Of farm operators.
3/ Beginning with 1975, based on the 1974 Census of Agriculture definition of a farm, which is a farm with sales of $1000 or more.
SOURCE: USDA. Economic Research Service Publication, ECIFS 1-2, October, 1982.

A. Gross farm income includes four principal components:

1. Cash receipts from farm marketings of farm products represent gross receipts from commercial market sales as well as loans (net of redemption) made or guaranteed by the Commodity Credit Corporation and other purchases under price support programs.

2. Government payments to farmers are those payments made directly to farm producers in connection with farm programs.

3. Other farm income is cash income from such sources as recreation, machine hire, and custom work.

4. Nonmoney income includes the rental value of housing provided by farm dwellings and the value of farm products consumed directly in farm households.

B. Farm production expenses are costs incurred in farm production as defined for the sector. They include current farm operating expenses for such items as wages paid to hired farm workers (in cash and in kind), outlays for repairs of farm equipment and operation of the farm, as well as purchases of oil, feed, and livestock. Overhead-type costs include charges for depreciation and other capital consumption, taxes on farm property, and interest.

C. Net farm income is what is left from gross farm income after deducting farm production expenses. It is a residual return to farm operators from current year output.

D. Net change in farm inventories is the estimated physical change in livestock and crops owned by farmers, valued at average prices prevailing during the year. To estimate the net income from production during a given calendar year, it is necessary to take into account net changes in farm inventories and recognize that the inventories will frequently be sold at prices different from those used in the inventory change valuation.

NEW MEXICO 1982 CROP SUMMARY

By Herbert L. Vanderberry

New Mexico weather conditions during the early months of 1982 were mostly favorable for farmers and ranchers. Temperatures were generally above normal, except for a short period of very cold temperatures during the first week in February. Preliminary forecasts of water supply in the lower Rio Grande Basin indicated about normal to slightly above normal amounts of runoff. By March 1, reservoir storage was rated as excellent and nearly twice the average amount for that time of year. Though water supplies seemed plentiful, soil moisture supplies were rated short to adequate in most areas. Mid-year crop prospects were poor to fair as precipitation was badly needed Statewide and soil moisture supplies were generally short. The State finally received much-needed precipitation during July, August and September; however, soil moisture supplies were only adequate by October 1. Average temperatures were near or slightly above normal during the summer/fall growing season. Relatively dry weather during the principal harvest period allowed farmers to cut fields without much delay. Yields were favorable for all crops, particularly alfalfa hay, which set a new record. The final quarter of 1982 saw temperatures mostly below normal and soil moisture supplies adequate in the north and short in the south. Fall seeded wheat and barley fields were progressing well by January 1, 1983.

WINTER WHEAT: Acreage for harvest totaled a record high 530,000 acres, up 6 percent from 1981. The average yield per acre was 25.0 bushels, 3 bushels higher than the previous year. Total production during 1982 was 13.3 million bushels, 20 percent more than 1981 and also the largest of record in New Mexico.

ALL HAY: All hay acreage harvested during 1982 totaled 320,000, down 7 percent from the previous year. The average yield was a record high 4.33 tons per acre, compared with 4.05 tons per acre in 1981. Total tonnage of all hay decreased 1 percent from the previous year to 1.38 million tons. Alfalfa hay harvested accounted for 260,000 acres and 1.30 million tons of the total acreage and production, respectively.

SORGHUM: The acreage harvested for grain reached 310,000, a 14 percent increase over 1981. The average yield of 47.0 bushels per acre was 2 bushels higher than the previous year. Total grain production was 14.6 million bushels, compared with 12.2 million bushels in 1981. Sorghum acreage harvested for silage was unchanged at 7,000 acres. The silage yield and production both were record highs at 23.0 tons per acre and 161,000 tons, respectively.

UPLAND COTTON: There were 68,000 acres harvested in 1982, down substantially from the 106,000 acres picked in 1981 and the lowest acreage harvested in recent years. Average yield per acre was also down to 551 pounds, compared with 602 pounds per acre the previous year. Lint production, at 78,000 bales, dropped 55,000 bales from the 1981 production.

AMERICAN-PIMA COTTON: Pima acreage harvested in 1982 totaled 9,400, up 2,600 acres from a year earlier. The average yield was 511 pounds per acre, down 47 pounds per acre from 1981. Lint production increased 27 percent from the previous year totalling 10,000 bales.

CORN: Acres harvested for grain totaled 90,000, up 15,000 acres from 1981. The grain yield was 110 bushels per acre, compared with 120 bushels per acre the previous year. Total grain production, at 9.9 million bushels, increased 10 percent from 1981. Acres harvested for silage reached 28,000, up 6,000 acres from a year earlier. Yield per acre was unchanged at 22.0 tons, but production rose 27 percent from 1981 to a record high 616,000 tons.

BARLEY: Total acreage harvested reached 37,000, 9,000 acres higher than the previous year and the highest harvested acreage of record in the State. The average yield of 66.0 bushels per acre was 1.0 bushel below the previous year's record high yield. Barley production during 1982 totaled 2.4 million bushels, a new record for the State and the first production of 2 million bushels or more on record.

PEANUTS: New Mexico peanut growers harvested and produced record acreage and pounds of production in 1982 with 10,400 acres and 25.2 million pounds, respectively. This compares with 10,000 acres harvested and 24.9 million pounds produced in 1981. The average yield in 1982 decreased 65 pounds per acre from the previous year to 2,425 pounds per acre.

POTATOES: State potato growers set new record high average yield and production numbers during 1982, with 1,260,000 cwt. produced averaging 280 cwt. per acre. This compares with the 1981 production of 945,000 cwt. averaging 210 cwt. per acre. Total acres harvested during 1982 were unchanged and equal to the previous year record of 4,500 acres.

NEW MEXICO 1982 VEGETABLE, FRUIT AND NUT SUMMARIES

By Mary Libbin

PECAN production for the 1982 crop year set another record with an estimated 25.0 million pounds being harvested. This is a 25 percent increase over the 1981 estimated crop of 20.0 million pounds. Yields varied by area and were influenced to some degree by a number of young trees coming into production, especially in Dona Ana County. The season average price dropped only slightly to 83 cents per pound resulting in a total value of production of over $20.7 million.

APPLES: The apple crop for 1982 is estimated at 286,000 bushels, approximately a 30 percent decrease from 1981. The decline in production is due to spring frosts that severely damaged the crop in several counties. The season average price rose to $5.35 per bushel, resulting in a total value of production of $1.53 million.

LETTUCE: Total lettuce produced in 1982 is estimated at 1,262,000 cwt. Acres harvested for both spring and fall crops totaled 4,800. Yield per acre for spring lettuce averaged 335 cwt. off of 1,500 acres. Fall lettuce yielded an average of 230 cwt. per acre from 3,300 acres harvested. Price per cwt. for spring lettuce is estimated at $12.40. Fall lettuce averaged $9.93 per cwt. Average price for both the spring and fall crops combined is $10.91 per cwt. for a total value of production of more than 13.7 million dollars.

ONION production for 1982 is estimated at 1,643,000 cwt., an increase of 32 percent over 1981. Acres harvested increased 900 acres; however, due to the 54 percent drop in price the total value of production dropped to $14,278,000, a decrease of almost 30 percent from 1981.

NEW MEXICO CHILE PEPPERS production is estimated at 24,800 dry equivalent tons in 1982, surpassing last year's total by 300 dry tons and establishing a new State record. This increase is attributable solely to an exceptional yield, as acreage was at the lowest level since 1978. The 1982 yield per acre harvested was 1.70 dry tons, 6 percent above the 1981 yield of 1.60 tons per acre. Crop value was down, however, as prices were down a cumulative 11 percent from last year; green processing chile prices were down 3 percent, red processing chile prices were down 17 percent, and fresh market prices were down an estimated 13 percent. Total value of the 1982 crop is estimated at 29.1 million dollars compared to 32.8 million dollars for the 1981 crop.

NEW MEXICO LIVESTOCK SUMMARY 1982

By Martin J. Owens
Robert Todd

Cattle and sheep came through the mild winter of 1981-82 in very good shape and calving and lambing were underway early in the year. Ranges and pastures were mostly in poor to fair condition through the first half of the year, forcing ranchers to feed longer than normal. Good rains later in the year, however, made for excellent late season range and calves came off fall grazing with good weight gains. Livestock prices were a big disappointment in 1982 as hog prices were the only class to show any improvement from 1981.

CATTLE AND CALVES: The January 1, 1983 estimate of cattle and calves in New Mexico was 1,450 thousand head, 3 percent below the estimate for January 1, 1982. This drop was attributable to sharply reduced calf and yearling numbers at year's end. Calf numbers were down 10 percent; steers over 500 pounds were down 15 percent; and heifers over 500 pounds not for cow replacement were down 14 percent. The number of cows in the State rose 5 percent from the previous year with beef cows going from 620 thousand to 650 thousand and dairy cows rising from 55 thousand to 58 thousand. Beef replacement heifers were up 4 percent to 100 thousand head and dairy replacements were up 10 percent to 23 thousand head. The number of bulls, at 45 thousand head, was up 7 percent. New Mexico's 1982 calf crop, counting both beef and dairy calves, was estimated at 580 thousand head, 3 percent below the 600 thousand estimated for 1981.

Cattle and calves on full feed for slaughter on January 1, 1983 was estimated at 149 thousand head, 17 percent above the January 1, 1982 level of 127 thousand head. Quarterly estimates of cattle on feed in New Mexico were discontinued in 1982.

SHEEP AND LAMBS: The number of sheep and lambs on hand January 1, 1983 was estimated at 610,000 head, a decrease of one percent from the 615,000 head on the same date a year earlier. Sheep and lambs on feed January 1, 1983, at 45,000 head, were up sharply from the 20,000 head estimated on January 1, 1982. Stock sheep, at 565,000 head, were down 30,000 head from the same period in 1982.

HOGS AND PIGS: New Mexico's hog and pig inventory on December 1, 1982 was estimated at 38,000 head; a major decline from the 62,000 head estimated a year earlier. Breeding stock, at 6,000 head, was down 25 percent and market animals, at 32,000 head, were down 41 percent.

CHICKENS: The December 1, 1982 estimate of chickens in the State was 1,548 thousand, down 15 percent from the previous year. Hens and pullets of laying age totaled 1,155 thousand compared to 1,509 thousand in 1981.

COMMERCIAL RED MEAT PRODUCTION: Production of red meat in New Mexico during 1982 totaled 95.0 million pounds, a decrease of 8 percent from the 103.5 million pounds produced during 1981. Total head slaughtered by species during 1982, with year earlier comparisons are as follows: Cattle - 153,400 and 165,300; Sheep - 117,600 and 86,500; and, Hogs - 25,100 and 38,700.

WOOL PRODUCTION: New Mexico's 1,500 sheep farms and ranches sheared 525,000 sheep, averaging 9.6 pounds per head, for a 5.0 million pound wool clip in 1982. This compares to 555,000 sheep, averaging 9.5 pounds per head, totaling 5.3 million pounds during 1981.

MILK PRODUCTION: New Mexico's dairy industry continued to expand rapidly in 1982, as milk production rose 21 percent from 1981; from 671 million pounds to 813 million pounds. Average production per cow was estimated at 14,263 pounds compared to 13,157 a year earlier.

EGG PRODUCTION: Total egg production in the State for the year ending November 30, 1982, was 302 million eggs, 13 percent below the 347 million eggs produced in 1981.
